All listed combinations are without and/or with very negligible bodywork/ modification possible. Wider wheelspacers are possible; however this increases the assembly expense with respect to the freedom of movement of the wheels.

Vehicle Specific Installation Kits (IK) are available to order separately.

Installation kits listed below always refer to the narrowest wheel / tire combination and use of Pirelli and Hankook tires. Furthermore, all recommended specifications to be considered in light of the vehicle depth; vehicle depth of 30/35mm should be taken into account.

Tire sizes are recommendations only; please check the axel weight of the vehicle and request the tire safety document from your tire supplier.
